

Locations/Sites

Central Registry Office

Notes

Each Registry has one home office
Defined in terms of the population in their catchments areas.

Data User Location

Notes

Includes:
Special Study/Researcher's Office - office where researcher does analysis on cancer/tumor/case (CTC) data; could be in a University, NIH, etc.
...

Hospital Cancer Registry

Notes

Place where they store abstracted records for all CTCs seen at that hospital
Can't define these in terms of catchments areas; they are based on who was actually seen at a hospital
Would like to allow hospital to log into a secure registry web site, search for a patient and provide the registry with updated information (such as date of last contact, better address, etc)

Hospital Record Department

Notes

Where all hospital medical records are stored by Medical Record Number.

Intra State Registry

Notes

Source of CTCs diagnosed in within the same state but in a different area than the Central Registry
For LA, this would be the other California registries.

Mobile Abstractor Laptop

Notes

A mobile abstractor is a person that goes to various places. The laptop of the mobile abstractor is the source of information.
This is extremely sensitive for process and data. May require encryption for data on mobile laptop.
Local processing occurs here.
Eventually, Mobile Abstractors will be needed less and less as the Registries get more info electronically vs. having to go get info. But this is a longer term change...not something that will happen overnight.

Other Provider

Notes

Would like to allow some of these places to log into a secure registry web site, search for a patient and provide the registry with updated information (such as date of last contact, better address, etc)

Includes:

Path Lab - a place where tissue is examined and reported on
Doctor's Office - place where patients are examined and/or treated and the corresponding information is stored
Radiation Therapy Center - Place where patients diagnosed and treated by using radiographic methods; corresponding information is stored
Radiology Lab - Place of diagnoses.

Nursing Home - Place where patients reside and die. (They may be diagnosed while a resident of the nursing home, but unlikely that nursing home staff makes the diagnosis.)

Hospice - Place where patients reside and die. (They may be diagnosed while a resident of the hospice, but unlikely that hospice staff makes the diagnosis.)

Dermatopathology Lab - Mainly diagnosis of melanomas; path lab for skin samples.

...

Other State Registry

Notes

Source of CTCs diagnosed in different state from the Central Registry
For Iowa, this would be Nebraska or Minnesota, for example.

Patient Residence

Notes

Place where patient resides

Registry Staff Home

Notes

The home of a Registry staff person.

A desktop or laptop will provide remote access to allow an individual working from home to carry out normal functions they would do at the Central Office.

This is extremely sensitive for process and data.

Recommendation: Pure Remote Access vs. Local Processing

ATL and NM do not allow staff to work from home.

DT and LA only allow selected managers to work from home

UT does not currently have staff working from home, but has not objections to the concept.

IA staff frequently works from home

SEER Office

Notes

Includes IMS as a sub-contractor of the SEER Program.

Supplemental Data Source

Notes

Includes:

Department of Motor Vehicles (DMV), Motor Vehicle Administration (MVA) - driver's license and demographic info on people generated and stored here

State Health Department - source of birth and death records; may also have population data

Other Government Offices - location where you can obtain info on voter registration; could be another source of population data.

Channels

xAbstract

Notes

xAbstraction Facility Leads

Notes

A list that tells an Abstractor where to go in the Hospital to find CTCs. They then go to other locations in the Hospital as they make discoveries, etc.

IA, NM, and possibly UT (southern part of the state): Have circuit rider abstractors. They don't rely as much on getting this list of leads from the Central Registry. They are more responsible for finding their CTCs.

xActive Follow-Up Need

Notes

xActive Follow-Up Need (Provider – Mobile Abstractor)

Notes

The Mobile Abstractor asks questions. They deal with Follow-Up Needs gotten from the Central Registry.

xFollow-Back Need

Notes

xFollow-Back Query (Central Registry – Health Data Provider)

Notes

xFollow-Back Query (Provider – Mobile Abstractor)

Notes

The Mobile Abstractor asks questions. These may be his/her own, or they may deal with Follow-Back Needs gotten from the Central Registry.

xFollow-Up Query

Notes

xHealth Records (Including Abstracts)

Notes

xHealth Records & Patient Medical Info

Notes

xMobile Abstractor (Participant)

Notes

xOther Health Records

Notes

All health records, but not including Abstracts

xOther Query

Notes

xPatient Set (Subset)

Notes

Minus patient identifying information.

xPatient Set DB Subset

Notes

xPatient Set Info

Notes

xPatient Set Info (Central Registry – Hospital Registry)

Notes

Includes facility level information

xPatient Set Info (Central Registry – Registry Staff Home)

Notes

Includes facility level information

xPatient Set Info minus Facility Info

Notes

Excludes facility level information

xQuery (Central Registry – Registry Staff Home)

Notes

xQuery (Central Registry – SEER)

Notes

xQuery (Info Request)

Notes

xReport (Central Registry - Hospital Registry)

Notes

xReport (Central Registry – SEER)

Notes

xRequests

Notes

xRequest for Data

Notes

xRequest for Medical Records

Notes

xResponse (Central Registry – Data User Location)

Notes

xResponse (Central Registry – Health Data Provider)

Notes

xResponse (Central Registry – Patient Residence)

Notes

xResponse (Central Registry – Registry Staff Home)

Notes

xResponse (Central Registry - SEER)

Notes

xRules

Notes

xSoftware Update

Notes

xSpecial Study Criteria (Central Registry-Data User Location)

Notes

xSpecial Study Criteria (Central Registry - SEER)
